Spaghetti Mat

Provides a safe walkway for roofing, construction sites and other work areas

What is the product:

Spaghetti mat is an innovative product made out of extruded pvc and sprayed in loop pattern.

What are the benefits to use your product?

It has many great features such as anti-slippery, anti-fatigue, UV resistant and fire retardant. When there is no backing water can drain through quickly and air can circulate so it's mildew resistant too.

How does your product work with our roofing system?

For roofing projects, unbacked mats in highly alert colors such as yellow or orange are recommended. They function as a safe walkway and protect the roof from damages that can be potentially caused by sharp objects. As a result it is a good investment to help increase the safety level and lower the maintenance cost in long term.

How does your product help other industries, where else might people find your products useful?

There are many other applications such as marine (boating), shower areas, patios, pools, zoos and aquariums, and soundproofing etc. Manufacturing facilities use backed mats between the isles to help collect the debris dropping from the work stations and help reduce the fatigue from standing long hours.

Features

- Easy to install and maintain
- Strong and lightweight
- Resistant to wind uplift
- UV stabilized and resistant to environmental and chemical degradation
- Available in many bright colors
- Reduces fatigue due to standing
